

### **calcium in biological systems pdf**

Calcium is a chemical element with symbol Ca and atomic number 20. An alkaline earth metal, calcium is a reactive metal that forms a dark oxide-nitride layer when exposed to air. Its physical and chemical properties are most similar to its heavier homologues strontium and barium. It is the fifth most abundant element in Earth's crust and the third most abundant metal, after iron and aluminium.

Boron is an essential element for plants and probably essential for human and animal health. Boron has a broad range of physiological effects on biological systems at low concentrations, whereas it is toxic to at high concentrations.

Homeostasis is the state of steady internal conditions maintained by living things. This dynamic state of equilibrium is the condition of optimal functioning for the organism and includes many variables, such as body temperature and fluid balance, being kept within certain pre-set limits (homeostatic range). Other variables include the pH of extracellular fluid, the concentrations of sodium ...

There is ample research on nonionizing, nonthermal wireless radiation showing health effects. Please see the BioInitiative report (2007), Pathophysiology Issue on EMFs (Aug 2009), and the Environmental Reviews (2010) article by Levitt/Lai to get an idea of the volume of scientific research which has been done on the topic of wireless radiation and health.
