Biology Chapter 13 Genetic Engineering Answer Key

Chapter 13 Genetic Engineering For thousands of years, people have chosen to breed only the animals and plants with the desired traits. This technique is called selective breeding. Selective breeding takes advantage of naturally occurring genetic variation in a group of living things. One tool used by selective breeders is hybridization. In hybridization, individuals with different traits are ...

Chapter 4 Genetic Engineering of Living Cells and Organisms

Selective Breeding – A technique in which only those animals and plants with the most desirable traits are allowed to produce the next generation.

Selective breeding – Use of microbes (bacteria & yeast)

Chapter 13 - Genetic Engineering What is genetic engineering? It is any manipulation of the DNA of an organism that does not involve natural processes. Many farmers and scientists (such as Gregor Mendel) had practiced artificial selection with crops and animals. This is not considered genetic engineering.
