

heterocycles in drugs and pdf

Heterocycles are common structural units in marketed drugs and in medicinal chemistry targets in the drug discovery process. Over 80% of top small molecule drugs by US retail sales in 2010 contain at least one heterocyclic fragment in their structures [1].

What sorts of heterocycles show up the most in approved drugs? This question has been asked several times before in the literature, but it's always nice to see an update. This one is from the Njardson group at Arizona, producers of the "Top 200 Drugs" posters. 84% of all unique small-molecule ...
