In software engineering and programming language theory, the abstraction principle (or the principle of abstraction) is a basic dictum that aims to reduce duplication of information in a program (usually with emphasis on code duplication) whenever practical by making use of abstractions provided by the programming language or software libraries [citation needed].

### **Abstraction principle (computer programming) - Wikipedia**

Different programming languages provide different types of abstraction, depending on the intended applications for the language. For example: In object-oriented programming languages such as C++, Object Pascal, or Java, the concept of abstraction has itself become a declarative statement “ using the keywords virtual (in C++) or abstract and interface (in Java).

In November 2006, NVIDIA introduced CUDA <sup>®</sup>, a general purpose parallel computing platform and programming model that leverages the parallel compute engine in NVIDIA GPUs to solve many complex computational problems in a more efficient way than on a CPU.. CUDA comes with a software environment that allows developers to use C as a high-level programming language.

Software design patterns are abstractions that help structure system designs. While not new, since the

concept was already described by Christopher Alexander in its architectural theories, it only gathered some traction in programming due to the publication of Design Patterns: Elements of Reusable ...
