A. Kettle Reboiler Kettle reboilers are commonly applied when a wide range of process operations (high turndown capability), large heat exchange surface, or high vapor quality is required. Kettle reboiler is also called a submerged bundle reboiler. Installations include column bottom reboilers, side reboilers, or vaporizers.

feeding the kettle reboiler. The kettle uses main column LCO pumparound heat between 450°F and

465°F, with the outlet temperature varying from 240–260°F. Throughout startup, there is little heat available from either debutanised gasoline or LCO pumparound due to low stream temperatures. As a result, the supplemental steam reboiler was added.
