New Keynesian economics is a school of contemporary macroeconomics that strives to provide microeconomic foundations for Keynesian economics. It developed partly as a response to criticisms of Keynesian macroeconomics by adherents of new classical macroeconomics.. Two main assumptions define the New Keynesian approach to macroeconomics.

In monetary economics, the equation of exchange is the relation:  $M \cdot V = P \cdot Y$  where, for a given period,  $M$  is the total nominal amount of money supply in circulation on average in an economy.  $V$  is the velocity of money, that is the average frequency with which a unit of money is spent.  $P$  is the price level.  $Y$  is an index of real expenditures (on newly produced goods and services).
