A heterojunction is the interface that occurs between two layers or regions of dissimilar crystalline semiconductors. These semiconducting materials have unequal band gaps as opposed to a homojunction. It is often advantageous to engineer the electronic energy bands in many solid-state device applications, including semiconductor lasers, solar cells and transistors ("heterotransistors") to name ...

1. Introduction. The developments in material science are the driving force of technological progress. It is the first time that the concept of nano materials is a German scientist Gleiter (Gleiter et al., 1981). Nanomaterials are, by definition, the natural or artificial materials possess at least one dimension in the size of nanoscale (Felix et al., 2013, Jiang et al., 2013, Nie et al., 2013).
